

National Oilwell

D Island Drilling Modules (Agip KCO)

KHI Role:

To provide piping design 3D modelling of four drilling modules for the Houston based National Oilwell.

Scope of Work:

The harsh environment drilling platforms were specially designed to drill on artificial or man made islands in the North Caspian Sea. Each platform is capable of drilling to depths of up to 30,000 feet.

KHI undertook the design using PDMS global 3D modelling software. Design work was carried out both KHI UK Head Office and Clients office in Houston.
